Health Care Products: Product Inventory

Use this record to monitor inventory of health care products and vaccines used in your organic livestock operation, and to document the health care products and vaccines that are in current use. You still need to keep individual animal or flock records to show specific dates of use on specific animals. Keep copies of labels on file. This list represents all the product treatments that you give to your animals. Do not use a product that is not on this list. Contact the office if you would like to add any products to this list. During your inspection, the inspector will verify that these are the only health products the producer uses.

Farm Name:			**Production Year:**
Health Care Product	Source or brand	Approved by VOF?	Reason for use

*** The National List of synthetic allowed for use as health care products in organic livestock production can be found under 205.603(a)(5)-(14) and 205.603(b)(1)-(6)**
